E-Management of Penal Case Documents

Prepared by
Tareq Ibrahim Qassim
Manager of Case Management Department/Head of Quality
Public Prosecution - Dubai
November 2009

Background

- The Public Prosecution Dubai was established in December 1992. Since then it embarked on a plan to use technology in managing case proceedings
- In 1995, DPP launched the first software that helped eradicate the use of registers which totaled 23 at that time
- In 1996, DPP launched a new software called "Cases Software" and it covered most aspects of case management

Ongoing development and improvement

 We have been reviewing and upgrading the "Cases Software" since 1997 as per the penal case cycle

Objectives of electronic case management

- Take the right decision at the right time
- Provide all information on any case for decision makers and parties to the case
- Ensure smooth investigation process
- Set indicators to measure efficiency of investigation
- Ensure saving data and information electronically

How does our system work

Our future vision

- Introduce a smart electronic case software capable of helping prosecutors take the right decisions during investigation
- Have access to the penal case electronic file and do away with paper files

Thank you for your attention
